Complete Data Protection with
ezTechDirect's Backup and Recovery

Protecting your mission-critical data has never been easier. Our automated cloud backup and recovery services will boost your productivity and reduce your time spent managing data loss.

Most businesses collect, retain, and transmit data that is critical to the success of their organization on a daily basis. Data theft, natural disasters and hardware failures can result in a hard hit to a business' bottom line. This hit could cost days of downtime and thousands of dollars to resolve, resulting in irreversible damage to a business' reputation.

Covers All Your Data Types

Files and Folders
Recover from the accidental deletion of any document, spreadsheet, or folder.

Exchange, SQL and System State
Enable backup and recovery of Exchange, SQL data, and System State.

VMware images
Restore full VM images from the cloud back to your host or our site.

"43% of companies experiencing disasters never re-open, 29% close within two years."
(McGladrey and Pullen)

"The average cost of a single incident of data loss is $10,000."
(Gartne)

"Small businesses experience a median of 6 outages per calendar year."
(Symantec)

ezTechDirect's Backup & Recovery service is highly secure, easy to use, scalable to your business' unique needs and fully supported by our backup experts.

Ease of Use

Quick Start
Setup is fast and easy, and within moments we'll be backing up your files automatically. Initial seeding services enable a fast start for large backup sets without tying up available bandwidth.

Automatic Backups
Schedule your backups to happen whenever you want, as frequently as you want. Initiating a backup manually is easy and takes just a couple of clicks.

Manage Local and Offsite Backups
Our flexible solution allows for any of your data to be stored online and/or saved to local storage, eliminating the need for a separate local-only backup solution.

Off-site Storage
Our redundant data centers on opposite U.S. coasts and Canada provide both data protection and scalability. Data is stored in three SSAE 16 Type II compliant data centers with redundant storage and biometric security and surveillance.

Native Exchange and SQL Support
Plugins for Microsoft Exchange and SQL Server are perfect for performing live, secure backups according to Microsoft's best practices.

Security

Military-grade encryption
Files are secured using 256-bit AES encryption and a private encryption key. SSL technology is used in data transmission. Your data is protected both onsite and over the internet.

Robust, Flexible Archiving
Data-archiving settings allows historical data to be saved as long as you need and meet applicable compliance standards.

Business Grade

Multiple Revisions
Store an unlimited number of versions of the same file so there's no fear of accidental deletion or overwriting a file.

Reporting and Notifications
We can send you notifications when your backups have completed successfully, including detailed statistics.

Multiple Device Support
Our solutions let you back up a single computer or server, multiple computers, laptops or even multiple offices, all under one account.
